OtherDescription

in low lying areas of three fields within 1 mile of DiCamba planted soybeans which are not affected
5 bpa
Entire property...not just a field.

Half way across field

Fields that were damaged anywhere from the end rows to half way across the field. I also have an 80 ac. field that was com
Damages showing up on garden plants. Tomatoes, peppers etc.
two fields were partially across field but one field was across the whole quarter

Seems about 65-75% it went at an angle across my entire field

West end of field.

Dead and dying trees, damaged garden plants

Half of the field (multiple fields)

Cupping of all the leaves reduction of the growth of a plant

West half of field

All curled up, stunted grow, drying up early!

Some fields are worst than others, time will tell about yield lost but we feel we will have some yield lost for sure.

Multiple fields in two counties turner and Lincoln

300 feet into the field

Contacted Farmers

insurance payed 2014,2015,2016

No. Because that is absolutely worthless and you know it.

No

N/A

N/A

No

Called Monsanto and was told to contact neighbor/applicator

Still waiting

called the 1800 rrextend. not very helpful

I've talked to monsanto reps and they would like to wait and see

I spoke with Monsanto. They tried to feed me their kool-aid

Not yet

No response

Applicator's response was that he for
the beans would grow out of it. And the yield would be the same or possibly better? They offered no help. The drifting farm
He said that he must have caused it but he did everything by the label.

No

talked to agronomists and coop where chemical was purchased. they are not commenting

Na

no

me dont believe it is from there dicamba, others believe it but it is not there fault because they did everything by the label
Waiting for them to inspect the field. They said it's the farmers fault.

Reported to Wheat Growers Coop and to Bayer

ApplicatorResponse

denial. but supposedly told a neighbor who wasn't affected that he did

One said they didn't do it. The other said they would look.

Will document

Said to let him know after harvest if needs to be turned into ins

not yet

said they would notify their insurance

Alliance in Mitchell which said they did not spray these beans however I saw their pickup in this field a few days before tl

they payed

Yes, and He was indifferent about the damage to our livelihood. He admitted to using it.

Talked to owr

No

They're going to pay

indifferent

N/A

my neighbor said that he would notify his insurance

I followed the label.

"Wait and see what happens!"

Yes Coop aid it wasn't applicator error

It wasn't my fault

Applicator is talking to Liability Insurance Company

all obviously say they followed the label and sprayed with prevailing winds. I know most of them did as I saw them spray

applicator\farmer have showed concern and have hinted towards possible compensation after harvest

I've talked to the applicator, he has talked to his insurance company and we will see how they yield

le says he's going to report it to his insurance. His name is Gator Hoeft. I'm not 100% sure he even has a custom applicato

Willing to work with me

e up this fall through insurance. Haven't heard from insurance company though, have my doubts if anything will get settl

they were understanding

He is very concerned about our situation.

llowed the label and left a 400' buffer so it couldn't be him. However, after looking at the field damage he called back to
ity of and he was not actually thinking about it, could be banned unless they can figure out how to control the volatility. It is a huge c

The owner sprayed his own.

No. Applicator is unknown.

yes he feels terrible but his insurance will not pay because he applied according to label. I have his spraying records

Has been very forthcoming, and has reported it to his liability insurance company.

They turned it into their insurance company

They followed all the directions on label.

They said it was dicamba damage. Their insurace declared they are not responsible for this damage

They ignored it and then said we will wait to see the yields when harvested!Un

Did not think they are responsible for it because they did ever thing by the label.

bors have said they'll work with us to make it right. I discussed their application procedures and it was all according to the

they say they did everything according to label

Bayer had no response and the applicator was understanding and could see the damage.

called, left message & no response

Other Information

mer spraying off label. neighbor reports seem to confirm two locations spraying extremely late with non labeled product.

I had damaged 550 acres last years and took 24 bu./ acre loss

knew this would happen after last years debacle. You had an opportunity to place a deadline on application, and you chose

ge last I planted 500 acres of damcaba crap beans and chose not to spray them with engenia I was to smart for that, this pr

Please ban the product from SD! Have no idea what neighbor sprayed dicamba. Could've drifted from miles away
so was examined by Ram Farrel and Matthew Harnisch both Agronomists. How do I send you the pictures? Thanks Linda B

you should outlaw dicamba!!!!

at should have never been approved. It was supposed to be banned! ...and of course the EPA under Trump approves it..
ner of field who is also the applicator and he agreed that Dicamba was likely the problem with my field since they used it

No

sent samples to SDSU

N/A

Two fields two neighbors damage to both sides of the field. All applications after R1.

A LOT of Dicamba damage in Brown Co

Will we be compensated for damages without upsetting neighbors?

fields. We have 3 fields that has neighbors with cupped soybeans. I'm ne field had damaged beans on the north side and
ying.

I have soybean fields in the area affected also but wanted to point out it has made to the garden area as well.

genia and Extendimaxx needs to change. Earlier apps. If I had a vote that mattered, it should only be allowed to be used pr

Have photos and satellite imagery of the damage

This stuff needs to be removed from use or way more regulation applied towards it.

no

ast South Dakota. You didn't need to look for a checkered flag along the field edge to know which fields were Xtend soyb
oncern for me as I grow non-gmo soybeans and do not have the option of planting extend beans. I really was maddened ;

He said he turned it in to his insurance agent but has not had a response.

SDU and found to be chemical damage. Damage was not from wind drift as closest farmer does not use chemicals. Please c
this has shut off my beans from growing and they are first trying to go again. Every field shows sign of damage.

I believe I will receive a significant yeild loss. I firmly believe what I saw those products should be outlawed

I am a farmer and would like to know who is responsible for this damage?

Unnecessary hardship!

I dont know if you can tell 100% where the dicamba came from.

This is on 3 separate quarters and an 80, these are terrible looking beans.

will not know the extent of damage for another month or so. Almost every field we had was affected some worse than c
I don't believe the borders were sprayed with a different product. Also no one should use this or everyone should use it.

he when he sprayed it but never offered to pay in there is any yield damage. Haven't talked to the other farmer yet but he

Just wrote down information and took pictures.

dicamba product used on their field adjacent to my garden. Same leaf curl that the weeds showed in the fields. Came out a

Slow from Monsanto

Slow from Monsanto

Yes, they took my information. I am awaiting a response from their field person.

BASF claims no responsibility

Not much if one. I hope they compensate us.

WAIT TILL HARVEST AND SEE IF YIELD SUFFERS

lookings that Sd state inspector took. Wheat growers have taken a sample and it came back positive dicamba. Then I am

They will send a agent out. Did not confirm nor deny it was their fault.

ge on a few branches to my apple trees in

It can't be vapor drift. I must have not cleaned my sprayer out correctly. Must be drought damage

did not report

No response from Monsanto

Disinterested don't want to talk about it

Said it was dicamba drift

Monsanto rep blamed applicators even though he had no facts or dates or weather conditions on the day of application

have not

No response from Monsanto

Didn't seem to bother applicator much, said

Not yet reported.

got a report number from Monsanto, heard nothing back

We have not reported it yet because we don't know which direction it come from.

Not yet because we do not know where the spray come from.

How do you know which one it came from .

The back part of the field

did not contact me back

I was f

So far we have had a good dialogue with the neighboring farmer and are evaluating our options.

Sympathetic

Claimed it wasn't them

Ja. Same leaf curl, same color as the weeds in the bean field adjacent to my garden. They came out and walked the garden

Very prompt

Very prompt

dicamba application adjacent to my field with a favorable wind. Also that they were applying dicamba two fields prior to mine

Applicator has turned into personal liability

They said they applied correctly and will tell Monsanto.

HE TALKED TO HIS INSURANCE COMPANY, STATED HE DID NOT SPRAY OFF LABEL.

He said he sprayed when calm and a north wind. Use of picked up later

They are upset. They followed all the steps required.

I believe my damage was caused either by

They say their insurance won't pay

He had his supplier's agronomist survey damage. He has supplied me with tomatoes to replace my production. Second neighbor

Came out and looked at damage. Did nothing so far, waiting till harvest.

Even disinterested and won't talk

Right away they didn't think it was their drift, but when news came out there was a problem, they agreed.

Very good addressed our concerns on gave us info to report our concerns with Chemical companies

have not

Minimal efforts to own up to the damage they caused. They are not trying to get in front of the problem. Very disappointed he followed label so nothing he could do. Was reported to insurance company. Was told by Insurance adjuster not to worry

It has been turned into his insurance agent

We will work with you

I am the applicator.

told neighbor he said he would turn it to insurance

His insurance paid for the crop loss

Very standoffish. Does not want to accept responsibility.

Neighboring farmer said he'd write my name down

They are aware that damage was done. Not certain on a plan for reimbursement yet.

Insurance adjuster denied their liability and suggested that we call Monsanto

We have not reported it yet because we don't know which direction it came from.

Not yet because we do not know where the spray came from.

We agreed to take tissue samples and send them in for diagnosis

looks perfectly fine. We need this technology so don't want the state to ban it. Just some farmers need to be better educated the person using extendamax and it looks like product lifted and traveled after it was sprayed. went opposite direction of where it was applied. This is the result of drift, it is volatilization. Have heard of very few cases where the product label was not followed which is the result of drift. Hopefully some restrictions not to spray so late in the growing season.

SDAL reported a 12.9 damage

with these vegetables to can, store, and eat throughout the winter. We depend on the produce from our garden and without it we would not have any vegetables.

Health improving it seems to be getting worse. Due to lack of pattern in the field it doesn't appear to be weather related more like a chemical drift.

This is a total disaster in travel a lot for my crop insurance job and this affects almost 100% of the non-dicamba soybeans.

IT WILL VOLATILIZE, PICK AND MOVE IN MORE THAN ONE DIRECTION, MONSANTO IS TO BLAME.

soybeans vrs. Extend soybeans. Who's going to be responsible for are sunflowers, field peas, and other crops when this happens? It's a mess. No excuse to have them mess this up this badly. They damaged the farmers, applicators, and salesmen credibility. It was a temperature inversion at the time of spraying or volatilization over the next few days. The wind was within the label or within the tolerance lines are fine so it's not physical drift. It's totally vapor drift! I have 4 organic farmers next to me I'm sure they got vapor drift from a 3rd party. All guidelines were followed. 4-5 days later significant damage was seen in upwind field. Canopy has been severely damaged.

How could we expect a okay this product it kills beans now as it did 30 years ago

We feel we have significant damage

If the acres are doubled of this product next year I cannot not imagine the amount of damage that will be done.

product moved several days after application

We need this technology to control weeds in soybeans!!! Safe application of the product needs to be figured out.

Damaged areas were reported to the South Dakota department of agriculture.

I don't want to give up the dicamba soybeans nor do I want to give up the premium we get for producing non-GMO beans. I believe a common sense company does not want to cover the damages, claiming applicant followed label and therefore not responsible for product. I was very careful about wind direction and speed at application. Applied on different days in June 2017, to several fields. Did not realize it was a temperature inversion. Came back from lab 12ppm dicamba was sprayed on calm day don't know that the neighbor should be liable.

Also submitted spink county claim. Phone number was incorrect. Should be 605-350-0844

there is damage on five different fields in our operation

Damage was the result of extendiax vaporizing days after the application was done. The neighbor that sprayed it did it correctly.

edge of field
damage on end and also .5 miles on another field

Both, depending on location
Both, depending on location

From 3 directions, so different areas of field

Portions of some fields and entire fields also

tomato plants in wife's garden

most of field

First started on the edge of field about 6 to 12 rows in 7 to 4 days later the whole field are showing symptoms.

N/A

Soybeans are 6 inches tall, undamaged fields are close to 24 inches tall

Moderate to severe cupping and arrested growth afterwards

Complete fields with damage other fields have edges. Hundreds of acres around Centerville in low areas with complete damage

cupping of leaves on whole fields

miner leaf cup

Leaf cupping across whole field

Low lying areas of the field. Approximately 40 acres out of 160 damaged.

Looks like 40-50 acres of a 175 acre field, neighboring field across the road damaged worse

Some are more than half but mostly edges.

At an angle half way across the field

Various places, edges down the center, random spots

Started in low areas of the adjacent field then slowly showed up in the sidehills.

Cupping of leaves, stunted growth.

Leaf cupping across 3 entire fields

Most fields affected are between 20-80% some 100%

N/A

NO

I discussed it with farmer/applicator. I
Contacted farmer. He I
Contacted farmers.

No response

Yes, I have reported dicamba symptomology to Monsanto representatives. They took the information.

N/A

have not reported

N/A

None

n/a

no

Just took note.

Wait while we process your submission. *haven't heard back*

Doesn't care to say the least. Unwilling to

Admitted to an application, has had 2

y and will work with me , 3 other neighbors won't respond , one even has just gotten a lawyer cause he has many compla
They said my beans might yield better??

It will probably boost yield

No. mild drift and it appears so far that cupping of leaves was the only symptom

Unresolved

Landowner would not say what was sprayed
said he would take care of the loss after harvest
Tests have yet to come back. Likely negative due to plant having already processed chemistry.

N/A

it is not a drift problem from application, but a vapor-air inversion problem.
operator reported claim to his insurance company, insurance company called today
dicamba damage. Called again on July 27 and operator said drift was over the entire field and also some on neighbor's field
he doesn't believe it was from him. At later date he would not answer phone or return messages. Finally got him to respond
knows it and feels bad. Asked him to contact his insurance and told him i was going to report it to the state so i'd have unbiased
Both know it. Asked them to contact their insurance and told them i was going to report it to the state so i'd have unbiased
Say there's nothing they can do because they followed label. So they are not responsible
Yes, I have reported the dicamba symptomology to the applicator. They expressed concern.
I have Xtend beans planted in the same field and show no visual effects. Around the 26th of July

will make it right with you

N/A

one producer referred us to their P&C company... doesn't sound like they are likely to reimburse for damage.

N/A

Most were skeptical it was them. One guy said he followed label so not his problem.

You can drive around o

applicator checking on insurance

N/A

You should've planted extend beans.

answer the phone. Was aware of the damaged that occurred, and did not inform us before we observed ourselves. Only k

agronomists out to look, one was a company rep for the product and insisted not dicamba damage, the other was a retail

How are we supposed to know who applied or where the application was made when it travels so far. On

Mixed questions up, I called Monsanto and they completely blame the farmer

He said if I can prove a yield loss he would pay for it.

CHEMICAL VOLITILIZED. DONT FEEL ITS TI

Sent to insurance

Same as above

Unresolved

"I followed the label so talk to Monsanto"

reported to applicator approximately 2 weeks ago - has not responded

Insurance agency responded

unconcerned

sorry about the damage and we will have to see if there is a yield reduction in the effected part of the field and decide wh

g more organized I farm at Gann Valley and Hoven and yes I have seen damaged beans there is one instance in Buffalo cou

plied the product (I personally witnessed some of the application) The applicator was very concerned and called the local
urance company and they have looked at the damage and claim it was volitization and not applicator error my other 3 ne

The damage observation date is an estimate and I do not know when he applied the product.

This has potential to be a huge issue, South Dakota needs to take into consideration how they will allow the use of this product or alfalfa. Most growers across the state are in need of another weed control option. Not having the Xtend program will

no

none of the seed companies at the farm show are pushing the Xtend beans to prevent drift from our neighbors. Same applicator had damage all over the area.

One way this product is any good is if everyone is using it. There are many areas affected around the area all from the same

Places where it has traveled up to 4 miles from fields where any dicamba was applied

Heard 40 acres of dicamba injury. Neighbor accepts full responsibility. He followed the label, but the product volatilized onto the other soybeans that show visual effects of dicamba, but the damage on these acres that we reported have shown extensive damage to other soybeans that show visual effects of dicamba, but the damage on these acres that we reported have shown extensive

Significant damage to soybean crop can't get anyone to stand behind damage to soybeans very frustrating. I wouldn't walk thru field, to see any local agronomy center in Beresford, SD. They concurred that it appeared to be leaf damage from dicamba. We had this. Had tested at Brookings SD at college. 11118

Everywhere around the area there appears to be some damage to most fields of soybeans unless they were Xtend Soybeans planted. I want product use band after June 1

If this product is allowed to be used throughout the country I am sure there won't be a decent garden around.

How is a "survey" going to help?

Sent samples to the SD Agricultural Lab 8/18/2017 do not know the application date since it was our neighbors

Damage occurred on NW Sec. 4, 118-62.

What to do.

Worried that a grower is claiming dicamba damage yet the dicamba beans in question are injured worse than the Xtend convention

Not sure on extent of damage. Might just be cosmetic. They are still filling out beans in the pods. The other neighbors who had damage to their soybeans have sent in samples to have them tested at this time I am waiting for a defense against my neighbors which is not right. Monsanto is going to come out the winners because they aren't facin

ained the new spray, how it worked, and confirmed my garden looked to be another victim. Confirmed I was not the only
neighbor contacted me

Monsanto says wait and see

Talked with BASF they will talk more at harvest

ere the only planted crop in my garden)

It has been reported, by my neig
sent an individual to observe the damange said he felt it was caused by a dicamba product but gave no hint of what they

couldn't, didn't know who done it.

Reported to the agronomist

se, " If you did everything right, why does my crop look like it does?" On the label, it says the applicator is ultimately responsible. The applicator acknowledged spraying nearby.

Came out and looked at the fields. Determined that there was damage to the soybeans.
confirmed it was dicamba damage
He said they followed label, his insurance said they are dropping the claim because he followed the label.
One notified their insurance agent. The other one was evasive to my questions and wasn't helpful.

Not sure of applicator, date or where.
How do you know it came from us, that stuff can travel for miles.
Many applicators in our area were applying dicamba without proper boundaries.
Acknowledged damage. & wants to wait for yield results

he said everyone has the problem and it wasn't his fault
when called, owner/applicator stated the problem was everywhere and it wasn't his fault.
ed fault, but given that the area was under extreme drought at the time, it was determined that no extra damage probably

Dicamba should be banned for application after 5-15 until 9-1
Have not reported to applicator for fear of losing other crop insurance coverage.
N/A

He is in Denial.
Of the 3 applicators only 1 has mentioned it to me, 1 mentioned it to my agronomist, the other 1 has made no contact to me.
One said "Yes, I know I damaged your crop." Another said he couldn't see any damage. No response from others.
I reported damage to operator across the road. the beans are dicamba, he said he didn't use Xtendimax.
The farmer accepted responsibility and apologized.
very apologetic. He explained how they had decided to stop spraying this year due to the amount of damage being reported.
after several attempts by me to contact him. Acknowledged the damage he caused and stated he would stay in contact. the
symptoms

in county as several applicators that damaged my fields, some have turned it in to insurance some have not returned my calls.
Talked to applicator, he wants BASF to settle it

I will not be allowing any of my renters to plant any type of soybeans until the issue with dicamba is resolved as I do have a neighbor to the applicator. I am told that he didn't agree that the fields have been affected. It cut my yield by at least half to 3/4.
they suggest that they applied it by the product standards.

I don't know where the drift came from.

Apologized for it and felt concerned. Said he did everything by the book.
states, not able to do anything about it

a timely manner. This chemistry should be banned from our state. We are breathing the same air that is causing crop inj

Experienced cupping of the bean leaves.

Experienced cupping of the soybean leaves.

There was a lot of curling of leaves in these fields. Damage is apparent to anyone looking at the field.

These were not Extend beans. Don't know where dicamba movement came from

I see more damage in more of mine fields. Some a mile away from where the dicamba was sprayed.

Our neighbor's garden even got hit.

our garden was affected. My tomatoes, peppers, watermelon were damaged. I did not get any tomatoes or peppers this year. The damage was most noticeable before harvest. Part damaged was still green when rest of field was ready to be harvested. At first I did not realize what the problem was and then it occurred to me that the farmer right across the road had killed. We know it came from a neighbor, but due to drift we are not sure which one across the road and diagonally. We tested a

we see damage on our garden, flowers, and trees.

Sporadic burned leaf margins, cupped leaves, dead growth tips. Not every plant was affected but most were and deformed from pre emerge application adjoining farm yard. Post emerge application of dicamba in mid to late June

The worst damage extended 1/8-1/4 mile or not quite half the length of the field (half mile long field). Damage appears to be mainly vapor drift as it just caused extensive cupping and didn't cause any necrosis or severe stunting

We have a variety of trees and shrubs on our property exhibiting leaf cupping
2/3 of the field.

early dead, plum tree is dead, rose bushes are stunted and almost dead, garden plot is nearly all dead, cherry tree has circular holes in the field at different spots. there was hardly any growth and then there would be spots of alfalfa that were good

I think this should be outlawed as there is no way to protect crops; but more importantly our organic crops and ground.

across the field; 50 acres was damaged severely, and the loss was significant. The rest of field also showed evidence of damage. If this was my sole income, I would be wiped out not only for this year but for several years to come. My trees had just gotten started. As far as I am concerned we lost about 30 acres and the yield differential was over 30 bushels per acre loss. that is 900 bushels. As far as I am concerned we lost about 30 acres and the yield differential was over 30 bushels per acre loss. that is 900 bushels.

It was drift from a neighbor spraying his field next to ours

I would take it off the market

se area had dicamba beans. I don't know where it came from. I'm not looking for damages. I would like you to do something. se area had dicamba beans. I don't know where it came from. I'm not looking for damages. I would like you to do something. we would like you to check it out. what will it cost me to get it checked out? thanks

cause conclusively proven? It's appalling to me that this stuff was ever approved for use given that they had to know its damage caused by volatilization after application. Damage appears to follow a low area that was upwind at the time of application and did not appear until about 2 weeks after post emerge spraying of dicamba was complete in June. Product may work for pre-emerge.

Adjacent farmer appears to be using Xtend soybeans based on his weed control and appeared to have been sprayed a week ago. We don't show the injury that particle drift has caused to my fields the last couple years. Only appears to be vapor drift with dicamba.

Dicamba is volatile, has been for 25 years, approval should not be reapproved.

Damage caused by volatilization after application. Damage appears to follow a low area that was upwind at the time of application. Property is surrounded by a corn field currently...I don't know if this is a dicamba drift issue or where it would have come from.

I feel dicamba drift cannot be controlled.

Had someone check out the field.
